

UEFA WECIS Women Master Extraction

Prepared: 2026-05-17

Purpose

- Create a single consolidated women's WECIS extraction target while avoiding duplicate counting across overlapping UEFA surveillance publications.
- Count programme-periods and populations, not papers.
- Use source papers only as field-level provenance unless they define the master all-injury programme-period.

Counting Rule

- One overlapping surveillance programme-period contributes once to high-level counts.
- Topic-specific papers cannot add another all-injury count for the same players, seasons, and method frame.
- Topic-specific papers may add missing field-level values such as burden, RTP, recurrence, diagnosis, location, or severity.
- Do not subtract overlapping periods unless a source directly reports the non-overlapping value.

Source Inventory And Decisions

Study ID	Year	Status	Category	Role	Decision	Title
S112	2024	uefa	WECIS women	master anchor	Use as the WECIS women all-injury source.	Hallen A. and Tomas R. and Ekstrand J. and Bengtsson H. and Van den Steen E. and Hagglund M. and Walden M. AO - Hallen et al. - 2024 - UEFA Women's Elite Club Injury Study a prospective study on 1527 injuries over four consecutive sea.pdf

Field-Level Provenance Requirements

- Each extracted value must record source study ID, page/table/figure, source role, direct-vs-derived status, and overlap decision.
- If a value is taken from a supplement paper, record why the master source did not already cover that field.
- If the same metric appears in two overlapping papers, prefer the broadest all-injury master unless the supplement reports a more specific row that matches the extraction field.
- If source definitions differ, split into a separate population/programme-period row instead of merging.

Reviewer Checklist

- Confirm all source IDs in the PDF have been reviewed against full text or reliable extracted text.
- Confirm no ordinary UEFA source paper remains in the analytical export alongside this master record.
- Confirm all source-only and already-included papers are marked in the provenance ledger.
- Confirm all live values have field-level provenance before marking the master record review-ready.
